

RESPRAYUK

Specialist UPVC paint sprayers

CABINET PAINTING SERVICES

When you're looking to give your home a fresh new look, a fresh coat of paint usually does the trick in most rooms. However, when it comes to kitchens, it's usually not that simple. As you probably know, kitchen renovations can be pretty costly, especially when you're looking at installing brand new cabinets and countertops. Thankfully, Respray UK can help you give your cabinets a brand new look for much less than it would cost to purchase new cabinets.

A SMART CABINET PAINTING SERVICES

Painting or refinishing your existing cabinets is an ideal way to give your space a more modern look. It's also a solution that makes your renovation process move much quicker, since you don't have to worry about demolition and removing the entire units. It's also a smart environmental choice, since it makes use of existing materials.

We'll work with you to help create the perfect look for your kitchen. First you'll decide what kind of finish you would like. If you're after a solid colour, we can paint the cabinets, or we can re-stain them to let the wood grain show through.

BENEFITS OF CABINET PAINTING & STAINING

Refinishing your cabinets lets you keep the same layout and storage options, which is great if you have something that already works for you. You also won't have to worry about turning your kitchen into a full on demolition zone. All the structures will stay put, which will make the whole process much quicker than a new cabinet installation.

While you might not think a simple coat of paint can make such a difference, you're in for a real surprise. You'll be amazed at the dramatic change you'll get from painting or refinishing your existing cabinets.

OUR CABINET PAINTING CONTRACTORS PROCESS

So, how does it all work? There are a couple of different methods we can use to achieve the look you want at a price that suits your budget.

One method is spray painting. For this process, we'll carefully remove the cabinet doors and take them to a shop offsite to be sprayed—this gives them a nice smooth, hard surface to create the appearance of brand new cabinets. We'll take care to make sure the finish is perfectly even, without any drips or blemishes. Cabinet boxes are then brushed on site using the same paint. We typically apply 4-5 coats of enamel paint, to ensure a smooth finish that looks brand new.

The second method is brush and roll. This method can be significantly cheaper, while still giving you great results. With this method, the cabinets are also carefully removed and taken to an offsite facility. When applying the paint, our painters will carefully roll and brush the paint onto the cabinets, ensuring a smooth finish. While brush and roll might not guarantee a finish that is as smooth as what you'll get with spraying, it can give you a great look if you're on a budget.
